Data & AI portfolio - at a glance

22 projects - one headline metric each

FLAGSHIP

decision-chain Reconciliation identities: 13/13 artifact PASS + 2 additive

3DpicToIFCModeling Solver-placed pieces (tower): 805 across 8 storeys

ANALYTICS (JOB #2)

revops-optimizer Modelled margin uplift: ~EUR 160k / yr

sales-kpi-analytics Distributor revenue modelled: EUR 21.8M

distributor-intelligence-platform Expected annual uplift: EUR 136,972 (8.4% of annual GM)

retail-analytics-real Real rows analyzed (UCI dataset): 1,067,371 (94.0% retained), GBP 19.6M

market-basket-analysis Affinity network (greedy modularity): 14 categories, 27 edges, 3 communities @ 0.58

route-optimizer OR-Tools vs Clarke-Wright: -4.6% distance

supply-network-opt Facility MILP vs greedy baseline: 310,666 vs 394,216 (-21.2%)

logistics-flow-studio Optimizer pick travel: 36.70 -> 18.85 m/order (-48.6%)

AUTOMATION (JOB #1)

agentic-automation-lab Modelled time returned: ~EUR 625k / yr

agent-flow-studio Modelled engineering time freed: ~EUR 47k / yr

doc-extract-agent Modelled AP capacity freed: ~EUR 110k / yr

automation-roi-explorer Portfolio net saving: EUR 383,300 / yr

chain-mcp Real engines exposed as tools: 6, from 5 source repos

APPLIED ML & OPS

predictive-maintenance Detection ROC-AUC: PCA 0.937 vs AE 0.921

fraud-detection-ops PR-AUC (test): 0.270 vs 0.034 rule baseline

energy-demand-forecast Forecast MASE: 0.497 (naive 1.369), 14/14 folds won

quality-anomaly-vision Best ROC-AUC: AE 0.779 vs PCA 0.772

RESEARCH

bio-efficient-ai FlyHash precision@10 (128 bits): 0.614 vs LSH 0.419

ml-models-lab Models: 5 (forecast, text, anomaly, churn, elasticity)

TEACHING

quantum-explainer Simulator: ~300 lines, zero dependencies

Honesty note: All metrics below are measured on synthetic, self-generated data unless otherwise stated. They demonstrate method, not results on any real company's business.
